Problem Statement: Edit and Delete Functionality in MERN Product App

This application extends the existing MERN product management platform to support real-time editing and deletion of product entries directly from a Material UI table. Each row has dedicated 'Edit' and 'Delete' buttons.
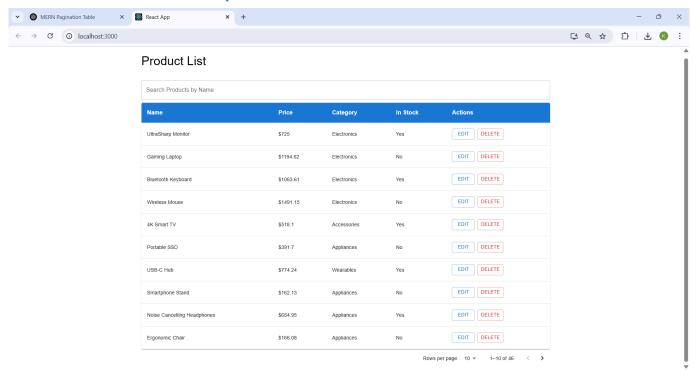

Functional Overview:

- Clicking 'Edit' turns row cells into input fields.

- 'Save' sends a PUT request to update the record in MongoDB.

- 'Delete' removes the document from MongoDB without any confirmation.

Note: No need to ask for confirmation for delete.

Screenshots

Table with Edit and Delete options enabled for each row.

Row in editable mode with SAVE button replacing the actions.
